Improved Pasture — Crop Application Schedule

Product range: SPANEX Bio-Capsules **Application basis:** All capsule dosages are for **2 hectares** of land **Source:** SRT Agro Science authoritative crop schedules **Date:** April 2026

SRT General Notes

- All capsule dosage is for **2-hectare land**.
 - Apply in soil (drip / drench / irrigation / soil spray).
 - Maintain a minimum **3–4 days gap** from chemical fertilisers.
 - Select products based on crop requirement.
 - Schedule prepared on average soil moisture and temperature conditions.
 - Dosage and timing of application may vary depending on farmer's practices, weather, soil health, and crop condition.
-

IMPROVED PASTURE (2 Hectare)

Stage	Week 0	Week 1	Week 2	Week 4	Week 8	Week 12	Week 20+	TOTAL
NPK Grow	—	5 caps	—	—	5 caps	—	—	10 Caps
Azoto Caps	5 caps	—	—	—	—	—	—	5 Caps
PSB Plus	5 caps	—	—	—	3 caps	—	—	8 Caps

Notes: Apply with first effective rain. Compatible with cattle on pasture — no withholding period.

Important Notes

1. All schedules per **2 hectares** — scale proportionally for your treated area.
2. **Strain matching for legumes:** Rhizo Caps must be strain-matched — confirm with SPANEX before order.
3. **Soil moisture required:** All biological products require adequate soil moisture for activation.
4. **Compatibility:** Do NOT mix with chlorinated water, copper-based fungicides, or bactericides.
5. **Storage:** Store capsules in cool, dry conditions — shelf life 16+ months at ambient.
6. **Validation:** Schedules to be validated against Australian field conditions.
